

Writing Release Notes

1. Copy `ReleaseNotes_R2012a.xml` to `ReleaseNotes_R2013a.xml`
2. Count lines of code: [Finding added lines of code](#)
3. Collect features and improvements from NTR, comparing to R2012a. Send email to team asking for additional ones.
4. Find deprecated fields by creating an `svn diff` from the last release until now and searching for `"deprecated"`;
5. Get number of bugs closed since last release
6. Get number of developers from TortoiseSVN Log Viewer
7. Number of system tests from latest nightly test results
8. Include static list of important outstanding bugs in this release

Finding added lines of code

1. Download working copies of `<SourceForge>/trunk/src` and `<Jazz>/trunk/code`
2. Download working copies of code from last release
3. Use `cloc` to compare C++, C/C++ Header, and C lines of code. Include plugin code from each public release.
